Relicchain

History stays, ownership moves: tokenize real-world memorabilia without moving it

The Problem & Our Solution

Memorabilia sits idle in storage or display cases, generating zero ongoing value for the venues and teams that own it.

- Historical items are locked away, illiquid, and disconnected from fans who'd pay for a stake in them
- Venues have no easy way to monetize cultural assets beyond ticket or merchandise sales
- Relicchain splits custody from ownership: item stays on display, token trades on-chain
- QR/NFC tags link each physical piece to its on-chain twin with full provenance history
- Owners earn automatic royalties every time the ownership token changes hands

How It Works

A simple loop: register the item, link it physically, trade ownership on-chain, settle instantly in USDC.

- User flow: scan QR/NFC tag to view item history, custody status, and current offers
- Venue mints an Asset ID NFT via Metaplex, tagged to a physical QR/NFC marker
- Custody Status tracker (displayed / vaulted / redeemable) syncs on-chain in real time
- USDC marketplace on Solana handles buying, selling, and offers with instant settlement
- On-chain: each trade triggers automatic royalty splits to organizer, artist, venue, platform

Solana, Anchor, Solana Pay, USDC SPL, React, Next.js, NFC/QR scanning SDK

Why Now & What's Next

RWA tokenization has regulatory momentum, and Solana's USDC rails finally make instant global collectible settlement real.

- RWA tokenization is gaining regulatory clarity worldwide, reducing legal uncertainty
- USDC on Solana enables instant, low-cost settlement for cross-border collectible trades
- Next: partner with one venue or event for a live PoC with 3-5 iconic items
- Build the legal framework for custody and ownership-rights transfer
- Then expand to multiple venues and launch a secondary marketplace with liquidity incentives
